Chapter 1 – What Is computer

Course – Basic Computer Knowledge Part - 1

- A computer Is an electronic device that manipulate information, or data.
- It has the ability to store, retrieve and process data
- You have already know that you can use a computer to type document, send email, play games, Railway reservation and browse the web.

A Basic Computer System

- A computer system refers to a computer and collection of various devices like Monitor, Keyboard, Mouse, CPU etc. Which are used with the computer.
- A computer is used as a data processor. The terms data and information are very commonly used.

Data :

- In simple word data can be understand as unprocessed raw facts and figure which require some short of processing to gain meaningful result. Example: “Priyanka gets 93.4% of marks” is information.

Information

- On the other hand processed organized data is called information.
